

## BLUE CARBON PROJECT GULF OF MORROSQUILLO “VIDA MANGLAR”: VCS#2290

<b>Offset Project Details</b>	
Protocol used for estimations	Verified Carbon Standard (VCS) VM007, with the Climate, Community & Biodiversity Standards (CCB)
Project location	Córdoba, Colombia
Project timeline	5/15/2015 - 5/14/2045
Project start date	5/15/2015
Dates and quantities when a specified quantity of emissions reductions or removals started, was modified, or reversed	5/15/2015
Types of project and offsets (removals, avoided) and breakdown of annual reporting data for each offset type	REDD+ (Reduced Emissions from Deforestation and Forest Degradation)
Whether the project meets established legal or nonprofit entity standards	Yes, the Blue Carbon Project Gulf of Morrosquillo “Vida Manglar” project meets <a href="#">Verra</a> (NGO) standards.
Durability period especially in relation to known or presumed project period being less than the atmospheric lifetime of GHG emissions	30 years
Third party validation / verification of project attributes	Yes. AENOR International S.A.U.
Emissions reduced or carbon removed on an annual basis	~14,800 tCO <sub>2</sub> <sup>e</sup>
<b>Details regarding accountability measures if a project is not completed or does not meet the projected emissions reductions or removal benefits, including, but not limited to, details regarding what actions the entity, either directly or by contractual obligation, shall take under both of the following circumstances:</b>	
If carbon storage projects are reversed.	In the case of reversals, CI will proceed in accordance with the rules and requirements of the applicable VCS Standard, section 2.4 AFOLU Non-Permanence Risk and Pooled Buffer Account ( <a href="https://verra.org/wp-content/uploads/2020/03/VCS-Standard-v4.0_Updated.pdf">https://verra.org/wp-content/uploads/2020/03/VCS-Standard-v4.0_Updated.pdf</a> ), which requires the cancellation of non-tradable buffer VCUs for “carbon known to, or believed to, have been lost,” thereby addressing non-permanence risks associated with REDD+ projects
If future emissions reductions do not materialize	NA as CI does not conduct future transactions.
The pertinent data and calculation methods needed to independently reproduce and verify the number of emissions reduction or removal credits issued using the protocol.	The baseline emissions associated with above-ground biomass and dead wood were calculated using the VMD0007 Estimation of baseline carbon stock changes and greenhouse gas emissions from unplanned deforestation and unplanned wetland degradation (BL-UP), version 3.3. The baseline emissions associated with the changes in soil carbon stock were calculated using the VCS VMD0050 Estimation of baseline soil carbon stock changes and greenhouse gas emissions in tidal wetland restoration and conservation project activities (BL-TW), version 1.0.
<b>Offset Partner Details</b>	
Seller, offset registry or program	Conservational International Foundation
Project name and registry ID	Blue Carbon Project Gulf of Morrosquillo “Vida Manglar” Project, VCS#2290
Offset type (removal, avoided)	REDD+ (Reduced Emissions from Deforestation and Forest Degradation)

**Protocol used for reductions and/or removals**

VCS, VM007 with CCB

**Third-party verification of data and claims**

Yes. AENOR International S.A.U.
